

CHEF™

CHEF

Configuration Management

Why CHEF as we already have ansible?

- What if SSH connection broke?
- What if applied configuration is modified?
- How to manage your infrastructure?
- What about performance?
- Support for heterogenous environments?

How CHEF helps?

- Agentfull
- Runs in desired frequency continuously
- You have database in Chef.
- We have MQ setup in Chef.
- Agent is having heterogenous support.

Chef Architecture

Chef works on Ruby

- <https://docs.chef.io/ruby.html>

Ruby: Syntax Validation

Ruby: Variables

- Define Variables
- Access Variables

Ruby: Quotes

- Single Quotes
